

# Acids/Bases

## Definitions

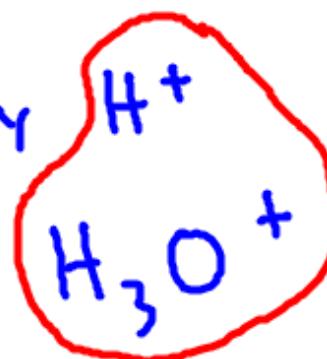

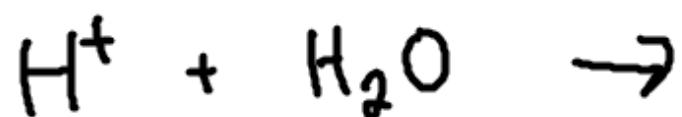

Arseneius Acid donates  $\text{H}^+$

Base donates  $\text{OH}^-$

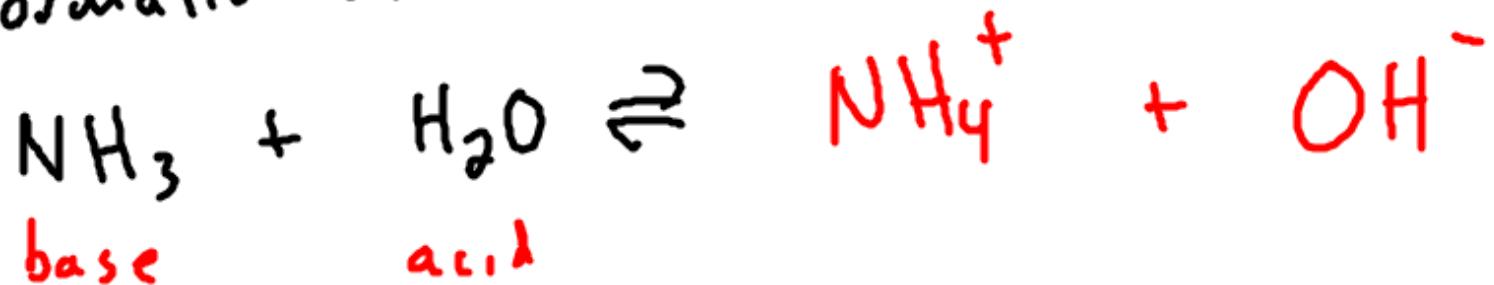

Brousted Acid donates  $\text{H}^+$

Base accept  $\text{H}^+$

Hydronium ion really  $\text{H}^+$  same

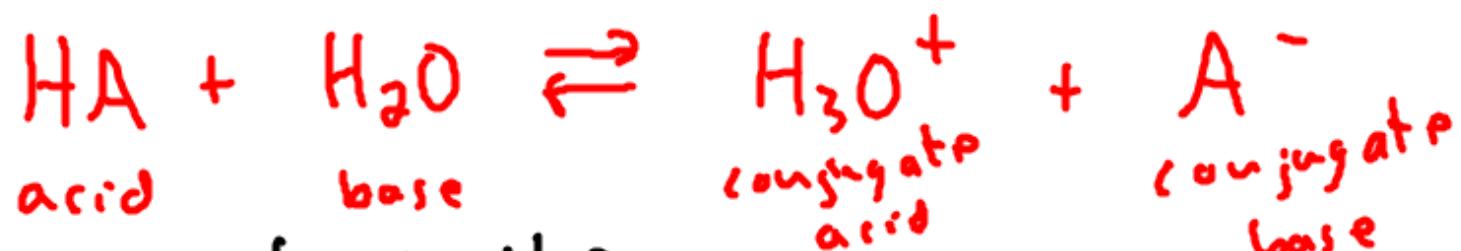

formation of  $\text{OH}^-$

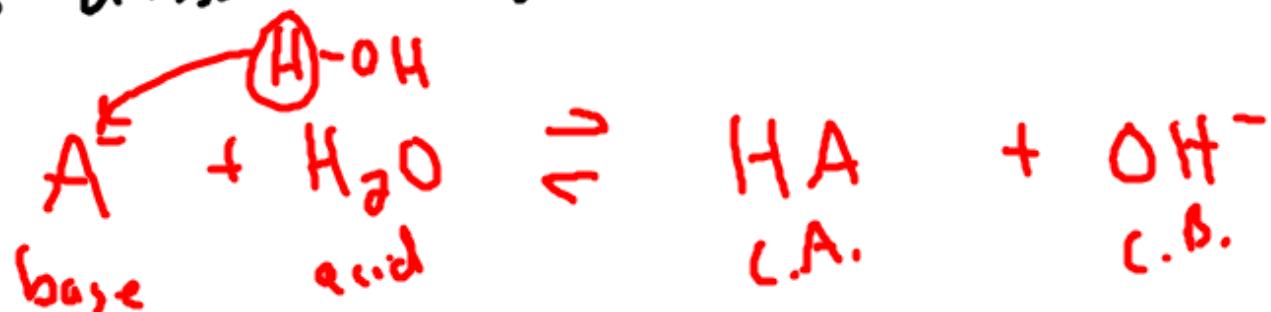

Sum up

Acids dissolve in  $\text{H}_2\text{O}$

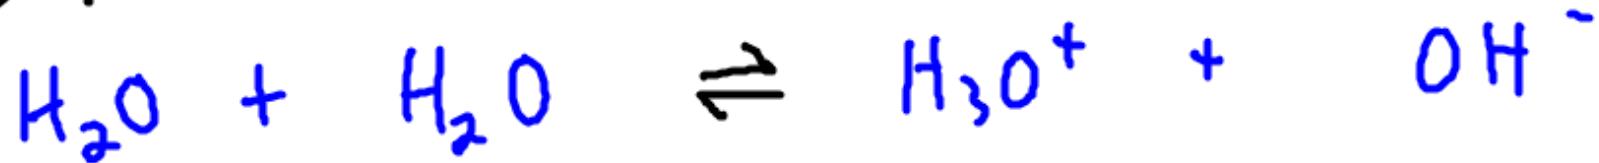

Bases dissolve in  $\text{H}_2\text{O}$

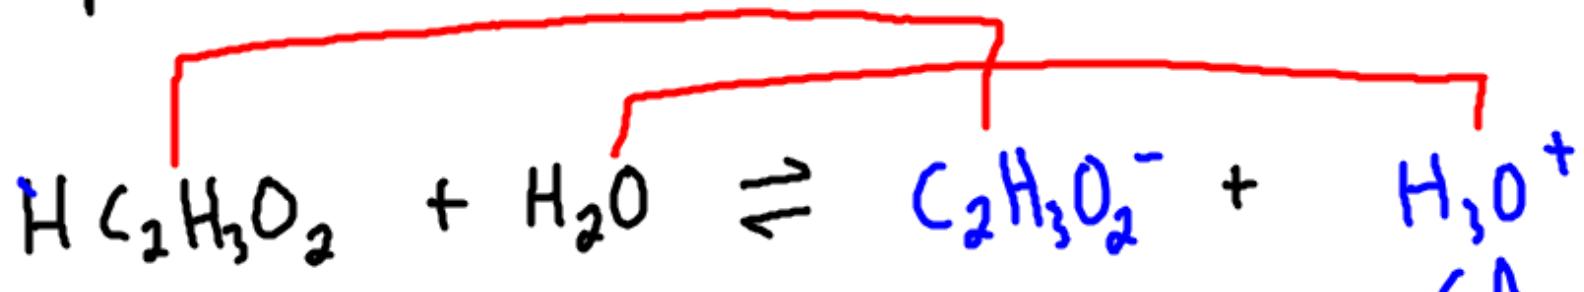

# Conjugate Acids + Bases

① Autoionization of  $\text{H}_2\text{O}$

acid                  base  
amphoteric - has properties of both

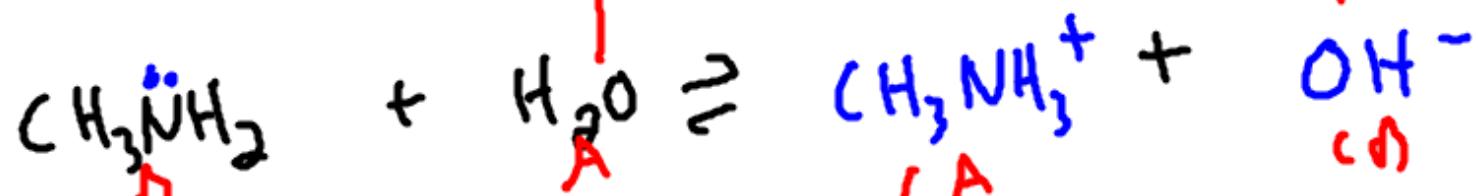

acetic acid

base

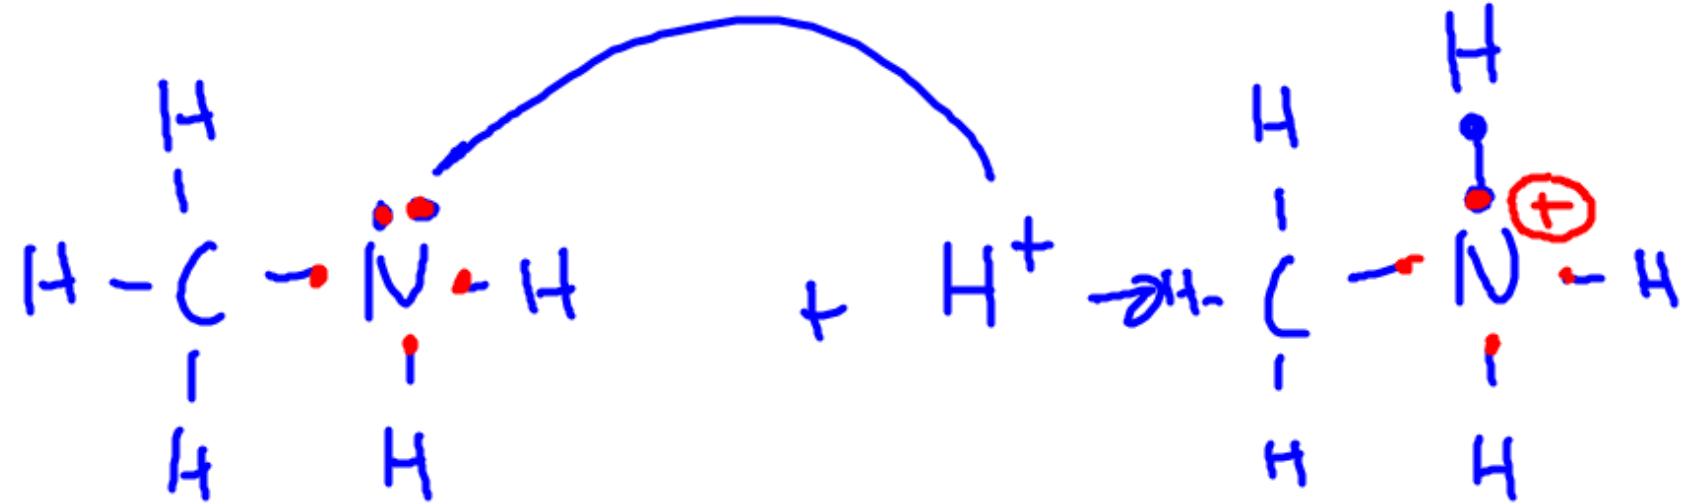

CB

CA

CA

CB

## Strength of Acids / Bases

Strong Acids - completely dissociate

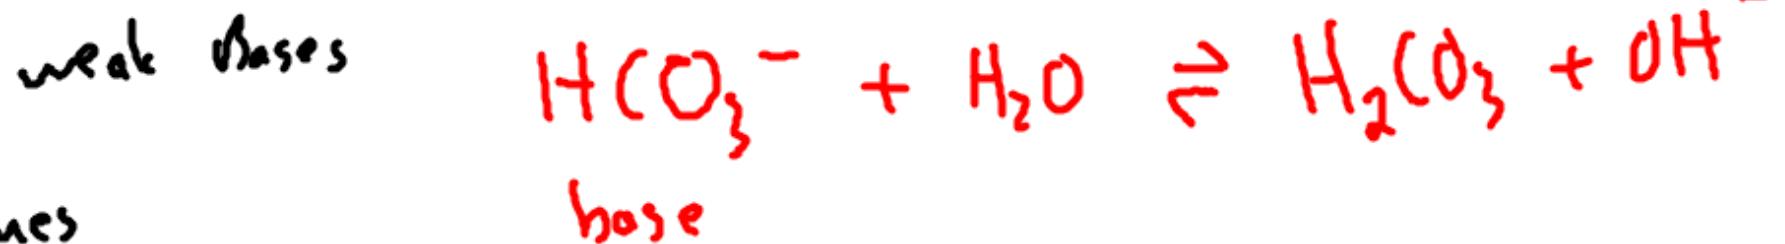

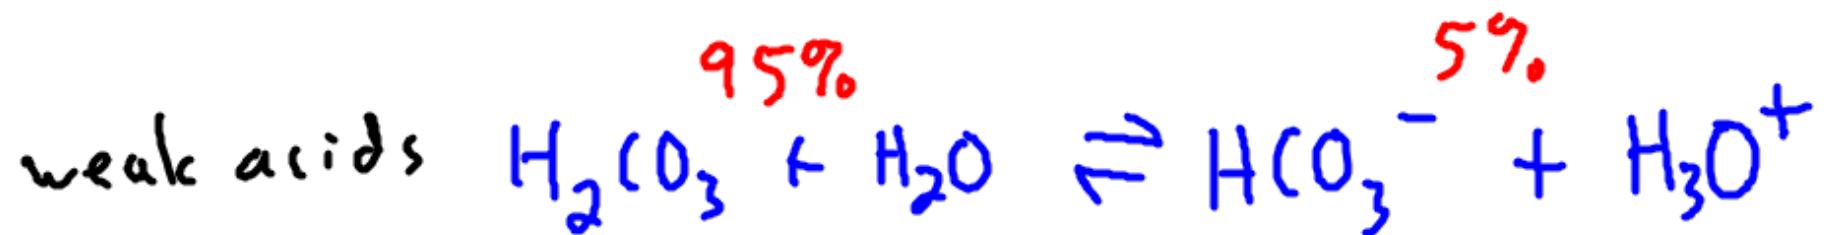

only, SA in the Body

Strong Bases completely dissociate  
 $\text{OH}^-$  compounds

weak acids / bases  
only partial dissociate

amines  
amine  
acids

## Acid-Base Equilibria

forward / Reverse Rates are equal

L<sub>c</sub> Châtelier's Principle - an equilibrium will adjust to relieve any changes

add more B - shift right

remove D - shift right

remove A - shift left

# Neutralization Rxns

acid + base  $\rightarrow$  salt + water

↓

any ionic  
compound
